DETAILED ACTION

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The word "invention" should be removed from the abstract.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Crawford (5,671,956).

Crawford discloses a thin flange 10 for use with a vacuum system comprising a member having a first face and an opposed, parallel second face. Each face has a sealing surface 15 and a knife-edge 35. The flange has a plurality of holes (threaded bores) 25 that align with bolt holes on mating flanges. Crawford discloses that the flange can be positioned between a first and second flange, each having a sealing surface that interacts with the first and second flange sealing surface of the flange 10 (see col. 2, lines 62-65). The flange has a mounting feature comprising at least one groove 80/82 on an inner surface.

Art Unit: 3676

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited prior art shows various flanges for vacuums and with knife-edges.
